# Zivid 2+

M130

Technical Specification

Introduction

Zivid 2+ is a product family of structured-light 3D cameras designed for machine vision applications. These cameras produce 2D color images and colored 3D point clouds with high resolution, fidelity and quality at high speeds ranging from 10's of milliseconds to seconds, depending on the application and required point cloud quality.

Zivid 2+ cameras are designed to be ruggedized and small, making them ideal for robot-mounted applications where the camera is fixed to the end-effector of a fast-moving robot. They are available in different variants with different field-of-view tailored to the volumes-of-interest of specific applications.

The Zivid 2+ cameras are designed for use in industrial environments and provide state-of-the-art performance and reliability. They are particularly suited to machine vision applications that require high-performance 3D imaging.

Overall, Zivid 2+ is an excellent choice for machine vision professionals who demand high-quality, flexible, and reliable 3D imaging.

Table of Contents

General specifications

Product	Zivid 2+ M130
Model Number [1]	Z2+ M130 (Zivid Two+ M130)
Revision [2]	Rev A0
Order code (SKU)	ZVD2P-M130
3D technology	Structured light
Imaging	2448 x 2048 (5.0 MPx) Native 3D Color
Point cloud output	3D (XYZ) + Color (RGB) + SNR
Exposure time (minimum per pattern projection)	1.677 ms
Aperture (A)	f/2.1 to f/16
Gain (G)	1x to 16x
Projector Brightness (B)	0.25x to 2.5x (in 3D capture mode) 0.0x to 2.5x (in 2D capture mode) 1x = 360 lumens 2.5x = 900 lumens (max)
Calibration	Factory calibrated
Certifications (for safety and EMC)	CE CB EN62368 FCC Class B KC
Typical capture time [3]	100 ms to 1 s

[1] The model number is found on the physical label on the product (marked M/N).
[2] The product's major revision of hardware for which this datasheet is valid. The revision can be found together with the model number (M/N) on the physical label of the product.
[3] From capture initialized until point cloud is ready to copy. Includes processing. Acquisition time can be shorter.

Operating distance and field of view

|	
Focus distance (mm)	1300
Working distance (mm)	800 to 2000
Optimal working distance (mm)	1000 to 1600
Field of view (mm)	790 x 650 at 1300
Spatial resolution (mm)	0.32 at 1300
	2.49 × 10-4 per distance (z) in mm

Accuracy specifications

Common conditions

The following table outlines the conditions applied under test and to all specifications unless stated otherwise.

Parameter	Description	Typical
Working distance (D)	Focus distance	1300 mm
	Optimal working distance	1000 - 1600 mm
Ambient temperature (Ta)	Typical temperature	15 - 30 °C
	Full temperature range	0 - 40 °C
Ambient light (La)		0 lux
Aperture (A)		f/8.0 - f/2.0
Gain (G)		1.0 x
Projector Brightness (B)		1.0 - 2.5 x
3D Engine	3D engine (reconstruction algorithm) used during measurement	Phase
Sampling mode	Sampling mode for sensor pixels used during measurement	All pixels sampled
Capture time	Acquisition time used during measurement	> 60 ms
	Capture time used during measurement	> 100 ms
Duty Cycle	Capture-to-Idle time ratio	5 – 30 %
Other		81% center crop (90% × 90%)
		HDR = off (single acquisition only)
		10 min warm-up
		Applied in-field correction

Typical specifications

Typical numbers are given at common conditions unless otherwise specified.

Property	Description	Typical
Warm-up time	The minimum recommended time needed for camera to stabilize from an idle state assuming capturing at a constant rate. [4]	10 minutes
Dynamic Range	Maximum for 1-frame acquisition, Phase engine	58 dB
	Maximum for 1-frame acquisition, Omni engine	84 dB
	Maximum for HDR acquisition	127 dB
Point precision	1σ Euclidian distance variation for a point between consecutive measurements at focus distance, D. [5]	210 µm
Local Planarity Precision	1σ Euclidian distance variation from a plane for a set of points within a smaller local region at focus distance, D. [6] [8]	300 µm
Global Planarity Trueness Error	Average deviation from a plane in field of view at focus distance, D. [7] [8]	< 0.24 mm
Dimension Trueness Error	70-percentile dimension error in field of view at focus distance, D, and typical temperature range. [9]	< 0.35 %
	70-percentile dimension error in field of view within optimal working distance and typical temperature range. [9]	< 0.40 %
	70-percentile dimension error in field of view within optimal working distance and full temperature range. [9]	< 0.60 %

Note: The term "accuracy" is composed of a precision component and a trueness component as described in ISO 5725.

---

[4] Some trueness changes may be experienced during warm-up phase.
[5] Point precision is found by measuring an individual point's capture-to-capture variation in space for all points in the point cloud over multiple consecutive measurements.
[6] Local planarity precision is defined as the average standard deviation of all individual local standard deviations across the entire field-of-view. An individual local standard deviation is found by measuring the orthogonal distance from a fitted plane of all individual points within a small local region, e.g., 50 by 50 pixels.
[7] Global planarity trueness error is found by measuring the distance of all individual points in the point cloud from a flat reference surface. Can also be interpreted as flatness.
[8] Measured using the unfiltered, raw output of a single-acquisition 3D capture on a Lambertian surface. Enabling post processing filters, such as Gaussian filter, can further suppress noise to great effect.
[9] Dimension trueness error is found by measuring the error of multiple calibrated reference distances in the point cloud. A reference distance can be 5 to 50 cm. The calibrated reference object is measured repeatedly across the entire field of view and operating distance, and during exposure of thermal and mechanical stress, such as temperature change, vibration, and shock.

Physical specifications

Size	169 mm x 124 mm x 56 mm
Weight	1000 g
Flatness tolerance of mounting surface [10]	±0.05 mm
Cable strain limit	125 N
Environmental	IP65 5 g sinusoidal [11] 15 g shock [12]
Operating temperature	0° to 40° C
Storage temperature	-20° to 60° C
Humidity [13]	10 – 90 % non-condensing
Safety [14]	RG2
Noise, typical at 1 m distance	< 28 dB, typical use 67 dB, at maximum fan speed
Data connection	10 GigE [15] M12 X-coded, 8-pin connector CAT6A, SF-UTP or better
Power connection	M12-5
Power adapter	24 V = 5A, DC EU, US, and UK power plug options
Power consumption, typical	15 W, Idle 45 W, TDP [16] 120 W, Peak

[10] The surface which the camera is mounted to should meet this specification.
[11] IEC 60068-2-6, 10-150 Hz, 5 g, in X, Y and Z direction, 2 hour per axis. Sweep rate 1 octave per minute sweep rate.
[12] IEC 60068-2-27, 15 g / 11 ms half sine shock pulses. 3 shocks per direction, 18 shocks in total.
[13] Relative humidity during operation and storage.
[14] IEC 62471, photobiological (eye) safety of LED. EN 62471:2015. IEC/TR 62471-5.
[15] Slower gigabit ethernet connections, such as 1 GigE, also supported, but can reduce capture speed.
[16] Thermal Design Power is the maximum power consumed while capturing 3D images in a continuous stream.

Revision history

Ver.	Date	Notes
0.1	5/23	Initial preliminary version. Typical specifications (trueness, precision) in tables and plots are based on simulated values.
1.0	5/23	Official version. Typical specifications updated with qualification data. Updated plots and mechanical drawings.
1.1	6/23	Updated typical specification table and plots with values based on updated qualification data.
1.2	9/23	Updated photobiological risk group rating from RG3 to RG2. Updated revision numbering from rev A to rev A0. This is to be consistent with label on the device.
